

When to Use

The Photo Gallery page type allows you to display images in an album or slide-show format on your site. When you create the gallery, you indicate which folders in your Digital Assets Library contain the images to display on the page. When the page is published, all image files stored in the selected folders are displayed on your Photo Gallery page.

If you want to create a page for non-image files, use the Digital Asset Gallery page type.

Examples of How to Use

- ▶ Display photos from community events.
- ▶ Post progress photos of ongoing engineering projects.
- ▶ Provide photo albums showcasing tourist locations.

Photo Gallery Page Sections & Fields

<i>Page Section</i>	<i>Field Name/Item</i>	<i>Description of usage</i>
General Properties	Include – Show Captions	Select the Show Captions option to display the text from the Description field of the Digital Assets. Add or edit the text in the Digital Asset Manager tool in the Admin Center.
	Include Provide Slide Show	Select this option to provide an automated slide show for your site visitors. The gallery page will automatically display each image for the length of time you specify in the Default time between frames box.
	Select Folders to Include in the Gallery	Select the folder(s) that contain the images to include in the gallery. Each time a new image is added to the selected asset folder(s), the image will automatically be added to the photo gallery.
Introduction	n/a	The text entered here appears at the top of the gallery page, above the images.
Conclusion	n/a	Text entered here appears at the bottom of the gallery page, below the images.

Photo Gallery Page Tips!

- ▶ Be sure to size all of the digital assets to the correct size before making them available for use on your site.
